1. (Amended) A frame reconstruction circuit for
reconstructing a block of video data that has been subject to
[MPEG] compression, the block of video data including a
plurality of pixels arranged in a horizontal and vertical
array, and comprising:

a first interpolation element having an input
terminal for receiving data representing the pixels of the
block of video data, wherein the first interpolation
element averages data representing a first pixel of the
block of data with data representing a second pixel
adjacent in a first direction in the block of data to the
first pixel, and providing the averaged value at an output
terminal;

a second interpolation element having an input
terminal coupled to the output terminal of the first
interpolation element, wherein the second interpolation
